

# Accelerated Dynamics in HMC Simulations of Lattice Field Theory

Jack Frankland

University of Edinburgh

December 18, 2017

# Introduction

- ▶ What are we doing?
  - ▶ Calculating properties of Quantum Mechanical Systems.

# Introduction

- ▶ What are we doing?
  - ▶ Calculating properties of Quantum Mechanical Systems.
- ▶ How are we doing it?
  - ▶ Using MCMC (Markov chain Monte Carlo) methods.

# Introduction

- ▶ What are we doing?
  - ▶ Calculating properties of Quantum Mechanical Systems.
- ▶ How are we doing it?
  - ▶ Using MCMC (Markov chain Monte Carlo) methods.
- ▶ What results have we got?
  - ▶ Successfully reproduced harmonic and anharmonic oscillator properties.

# Introduction

- ▶ What are we doing?
  - ▶ Calculating properties of Quantum Mechanical Systems.
- ▶ How are we doing it?
  - ▶ Using MCMC (Markov chain Monte Carlo) methods.
- ▶ What results have we got?
  - ▶ Successfully reproduced harmonic and anharmonic oscillator properties.
- ▶ Why are we doing it?
  - ▶ Can be used for calculations in lattice field theory.

## Results - Harmonic Oscillator Expectation Values

| Value               | Measured | Discrete Theory | Continuum Theory |
|---------------------|----------|-----------------|------------------|
| $\langle x \rangle$ | FILL     | 0               | 0                |

## Results - Harmonic Oscillator Expectation Values

| Value                 | Measured | Discrete Theory | Continuum Theory |
|-----------------------|----------|-----------------|------------------|
| $\langle x \rangle$   | FILL     | 0               | 0                |
| $\langle x^2 \rangle$ | FILL     | 0.4472135955    | $\frac{1}{2}$    |

## Results - Harmonic Oscillator Expectation Values

| Value                 | Measured | Discrete Theory | Continuum Theory |
|-----------------------|----------|-----------------|------------------|
| $\langle x \rangle$   | FILL     | 0               | 0                |
| $\langle x^2 \rangle$ | FILL     | 0.4472135955    | $\frac{1}{2}$    |
| $E_0$                 | FILL     | 0.4472135955    | $\frac{1}{2}$    |

## Results - Harmonic Oscillator Expectation Values

| Value                 | Measured | Discrete Theory | Continuum Theory |
|-----------------------|----------|-----------------|------------------|
| $\langle x \rangle$   | FILL     | 0               | 0                |
| $\langle x^2 \rangle$ | FILL     | 0.4472135955    | $\frac{1}{2}$    |
| $E_0$                 | FILL     | 0.4472135955    | $\frac{1}{2}$    |
| $E_1$                 | FILL     | FILL            | $\frac{3}{2}$    |

**Table 1:** Expectation Values for quantum harmonic oscillator with  $\mu^2 = 1$ , lattice spacing = 1, lattice size = 1000

## Results - Harmonic Oscillator Potential

Figure 1: Harmonic Oscillator Potential with  $\mu^2 = 1$ .

## Results - Harmonic Oscillator Wave Function

**Figure 2:** Continuum, discrete and measured wave functions for the harmonic oscillator with  $\mu^2 = 1$ ,  $m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.1$ ,  $N = 10$ , configurations = 100000, burn period = 1000.

## Results - Harmonic Oscillator Typical Trajectory

Figure 3: Typical configuration for the harmonic oscillator with  $\mu^2 = 1$ ,  $m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.1$ ,  $N = 10$ , configurations = 100000, burn period = 1000.

## Results - Anharmonic Oscillator Potential

Figure 4: Harmonic Oscillator Potential with  $\mu^2 = 1$ .

## Results - Anharmonic Oscillator Expectation Values

| Value               | Measured | Reference Values |
|---------------------|----------|------------------|
| $\langle x \rangle$ | FILL     | <i>FILL</i>      |

## Results - Anharmonic Oscillator Expectation Values

| Value                 | Measured | Reference Values |
|-----------------------|----------|------------------|
| $\langle x \rangle$   | FILL     | <i>FILL</i>      |
| $\langle x^2 \rangle$ | FILL     | <i>FILL</i>      |

## Results - Anharmonic Oscillator Expectation Values

| Value                 | Measured | Reference Values |
|-----------------------|----------|------------------|
| $\langle x \rangle$   | FILL     | <i>FILL</i>      |
| $\langle x^2 \rangle$ | FILL     | <i>FILL</i>      |
| $E_0$                 | FILL     | <i>FILL</i>      |

## Results - Anharmonic Oscillator Expectation Values

| Value                 | Measured | Reference Values |
|-----------------------|----------|------------------|
| $\langle x \rangle$   | FILL     | <i>FILL</i>      |
| $\langle x^2 \rangle$ | FILL     | <i>FILL</i>      |
| $E_0$                 | FILL     | <i>FILL</i>      |
| $E_1$                 | FILL     | <i>FILL</i>      |

**Table 2:** Expectation Values for quantum anharmonic oscillator with  $\mu^2 = 1$ , lattice spacing = 1, lattice size = 1000

## Results - Anharmonic Oscillator Wave Function

**Figure 5:** Measured wave function for the harmonic oscillator with  $\lambda = 1$ ,  $f^2 = 4m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.01$ ,  $N = 100$ , configurations = 100000, burn period = 1000.

## Results - Anharmonic Oscillator Typical Trajectory

**Figure 6:** Typical configuration for the anharmonic oscillator with  $\lambda = 1$ ,  $f^2 = 4$ ,  $m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.01$ ,  $N = 100$ , configurations = 100000, burn period = 1000.

## Results - A Deeper Anharmonic Oscillator Potential

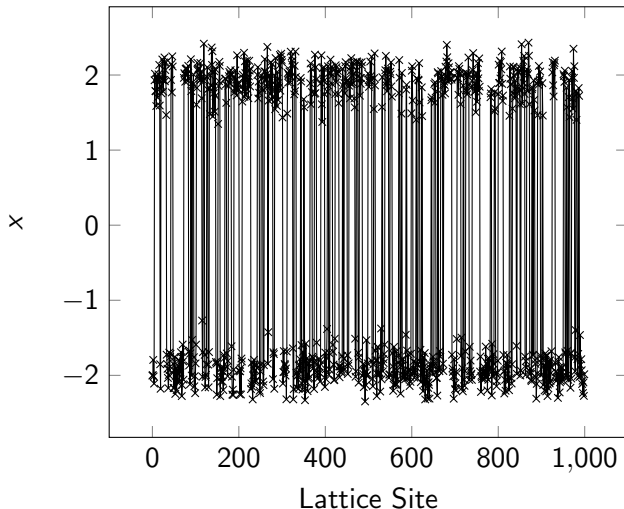

Figure 7: Anharmonic Oscillator Potential with  $\lambda = 1$ ,  $f^2 = 20$

## Results - A Deeper Anharmonic Oscillator Wave Function

**Figure 8:** Measured wave function for the harmonic oscillator with  $\lambda = 1$ ,  $f^2 = 4m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.01$ ,  $N = 100$ , configurations = 100000, burn period = 1000.

## Results - A Deeper Anharmonic Oscillator Typical Trajectory

**Figure 9:** Typical configuration for the anharmonic oscillator with  $\lambda = 1$ ,  $f^2 = 4$ ,  $m = 1$ ,  $a = 1$ ,  $L = 1000$ ,  $d = 0.01$ ,  $N =$

# Conclusion

- ▶ Did it work?
  - ▶ Successfully reproduced known values using HMC method.

# Conclusion

- ▶ Did it work?
  - ▶ Successfully reproduced known values using HMC method.
- ▶ What next?
  - ▶ Introduce “tempering” into the dynamics to sample from isolated modes.

# Conclusion

- ▶ Did it work?
  - ▶ Successfully reproduced known values using HMC method.
- ▶ What next?
  - ▶ Introduce “tempering” into the dynamics to sample from isolated modes.
- ▶ Applications of tempering?
  - ▶ Potentially applicable to lattice field theory where computation time is far more costly.
